1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, 7-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yu et al in view of Blackburn et al.

Yu et al discloses method for measuring electromotive force constant of motor comprising steps of measuring phase voltage of motor when motor rotates to a predetermined velocity and obtaining electromotive force constant of motor according to relationship of phase voltage and predetermined velocity, see col 2 lines 60-65, col 6 lines 55-67 and col 7 lines 1-10. Yu et al lacks disclosing motor to rotate in single phase mode. Blackburn et al discloses motor to rotate in single phase mode see abstract. It would have been obvious to one of ordinary skill in the art to combine method of measuring electromotive force constant of Yu et al with motor rotating in single phase mode of Blackburn et al for energy consumption by motor to be minimized.

3. Claims 4-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ohm et al and Mir et al disclose angular velocity and emf constant.
